Water Softening

ProMate 7.1 DMT

ONE SYSTEM DUAL SOLUTIONS

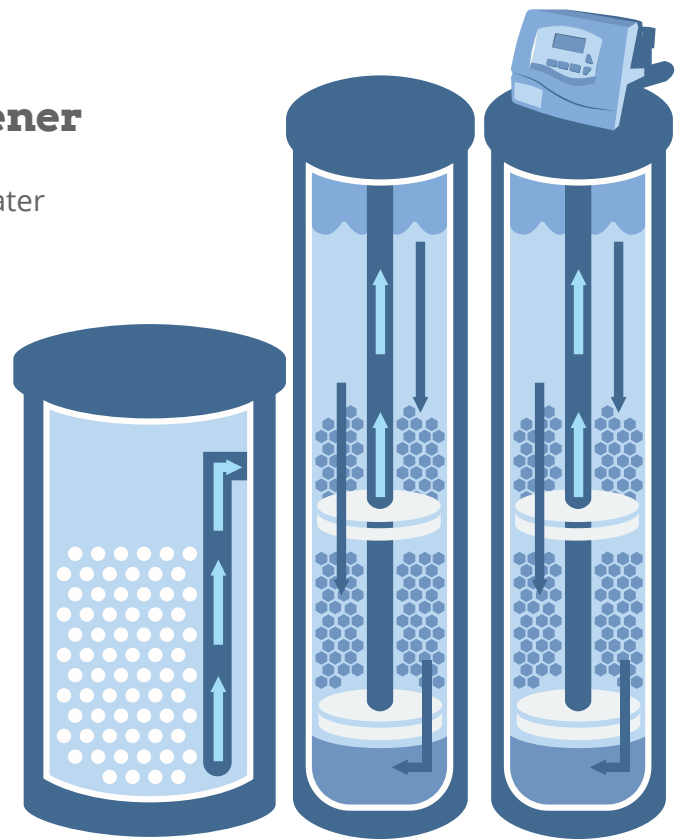

ProMate[®] 7.1 DMT
DUAL MEDIA TECHNOLOGY SYSTEM

Do more for your water and the environment

The ProMate 7.1 dual media technology (DMT) is one of the most efficient systems which incorporates multiple media technology to solve multiple water problems with one system. Water enters the top chamber removing chlorine and improving the taste and odor of your water. Water then passes through the bottom chamber where it is softened by removing calcium, magnesium and other dissolved minerals. The ProMate 7.1-DMT uses counter-current regeneration. This method of regeneration allows us to achieve over 4700 grains of hardness removal per lb. of salt.*

Benefits of the ProMate 7.1 - DMT softener

- Save up to 57% on operating costs for your water heater
- Uses less salt, which means less lugging
- Extends the life of your water using appliances
- Makes clothing whiter, brighter and less scratchy
- No more spotty dishes
- Softer skin and more manageable hair
- Cleaner fixtures, stain-free sinks, tubs and showers

*Efficiency rating based on standard factory settings.
